Diploma in Food Processing Technology

ELIGIBILITY - Plus Two | DURATION - One Year

The food industry we know today represents a large potential for growth and income generation, and even reduces the burden on the agricultural sector. Being a vital element to abridge the gap between the agriculture and industrial segments of the economy, the food processing industry is considered as a new approach towards creating jobs for the Indian population.

Though some jobs in food processing may not require a person to possess specific qualification in food processing, some hands on experience with the equipments and conceptual knowledge of the processing methods definitely comes to aid. Like any other career, it is imperative to have the appropriate aptitude level to make a successful career in food processing. This field mainly deals with food science and technologies that are being used to transform raw ingredients into food. Food technology consists of methods such as preservation, packaging and distribution to provide clean and nutritious food for the consumption of humans and animals. In India, the food processing technology is growing in the field of consumer industry which includes the production of pasta, noodles, breads, cake, pastries, ready to eat products and ready to cook products.

WISESTEPS has introduced this Diploma in Food processing technology to equip individuals to meet the demands of the market.
